

Let's Talk Architecture and Climate adaptation: Italian and Danish solutions

We invite you to join us for a Danish-Italian dialogue on how architecture can contribute to design our cities to cope with the drastically changing climate.

As climate patterns change, so must the role of buildings and settlements. How our cities interact with their environment, protecting especially vulnerable residents, will be crucial to building strong communities.

Through a cross-cultural dialogue we question how architecture, and the built environment can foster new experimental ways to help us adapt to the changing world. Both high- and low-tech solutions to environmental design could be key in making buildings smarter and more self-sufficient, but what approaches do we have at hand? And what solutions can make the biggest impact?

Join the talk with insights from:

Francesca Cesa Bianchi Partner at Stefano Boeri Architetti (IT)
Ole Schrøder Founding Partner at Tredje Natur, (DK)
Simona Collarini Director – General Urban Planning Sector, City of Milan (IT)
Lykke Leonardsen Head of program for Resilient and Sustainable City Solutions at City of Copenhagen (DK).

Info

Palazzo Francesco Turati, Milan
November 9, 2022
10:30am –12.30pm
(registration and coffee from 10.00am)

The talk will be moderated by journalist, Michael Booth.

Let's keep talking in Copenhagen, the UNESCO World Capital of Architecture 2023-2025

In July 2023, Copenhagen will be hosting the International Union of Architects (UIA) World Congress of Architects, with the title "Sustainable Futures – Leave no one behind". From 2023 to 2025, the Danish capital has also been designated the UNESCO World Capital of Architecture.

Leading up to the congress, we are hosting a series of cross-cultural talks with architects from Denmark, the United States, Italy, France, and Germany. During these talks we will discuss architecture as an essential tool for achieving many of the UN 17 Sustainable Development Goals and the overriding principle of "Leave no one behind".

**We want the world to talk about architecture.
And we invite you to start talking, too.
Join us.**

This talk is organized by Danish Architecture Center, UIA2023CPH, and Creative Denmark. The project is supported by the Danish Arts Foundation, the Danish Ministry of Foreign Affairs, and the Ministry of Culture Denmark. Danish Architecture Center (DAC) is an international cultural attraction creating engaging experiences and debates about architecture, design, and urban development through exhibitions, tours, events, learning, and networking. DAC is a public-private partnership between the foundation Realdania and the Danish government.
